

## MY DISPLAY IS NOT PAINTING A MAP.

- Check your G, H, and I tab setup. Make sure every option is filled out correctly.

### G - Resources

- Client
- Farm
- Field
- Task
- Crop Season

### H - Equipment

- Machine Model
- Machine Name
- Implement Model
- Implement Name
- Implement Widths

### I - Document

- Correct Operation
- Seed Type
- Variety

- On your I tab (Document), make sure there are only 2 tabs open at the top of the page - Harvest and New.

## MY HOME SCREEN SHOWS 'CONTROLLER NOT YET AVAILABLE'.

- Your display screen is still set up for a previous machine controller (i.e. planter).
- Use the Layout Manager tool to set your screen up for combine functions.

## MY MACHINE TYPE IS NOT LISTED.

- Your display setup file did not include the machine type you are looking for.
- Use Operations Center to make a new setup file that includes ALL pieces of equipment (machines and implements) you will need.

## CLIENT, FARM, & FIELD ARE GRAYED OUT.

- Make sure your implement is lifted, the master switch is turned 'Off', and you are not recording an AutoTrac line.

## GS3 2630 PRO TIPS

- When naming your fields, be sure to leave out crop types or years. There are separate areas to enter these on the display.
- Use the same field names for every operation, every year. This makes it easier to organize and use your data.
- Correctly document your crop varieties during planting. This is critical for using Variety Locator during harvest.
