

Setting up a Straight Track Line

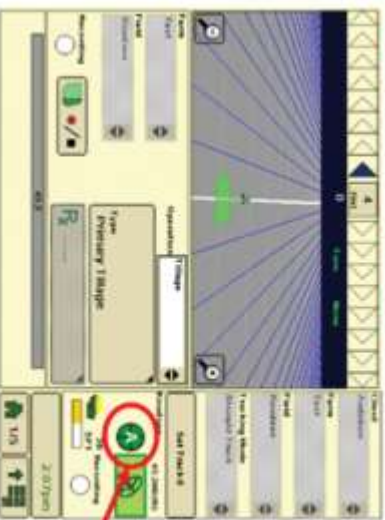

Step 1: Select "Set Track 0"

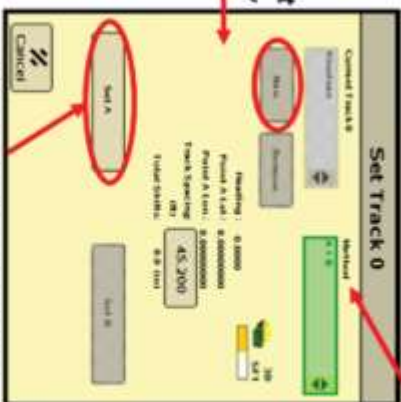

***Note:** In order to change AutoTrac modes. Use the "Tracking Mode" box located by Step 1. Example: Switching from Straight Track to Adaptive Curves.

***Note:** If Steering is not turned "On" AutoTrac will not work.

***Note:** This same process is used when setting up AutoTrac in any Machine. The "Resume" switch location (Step 7) will be the only variance.

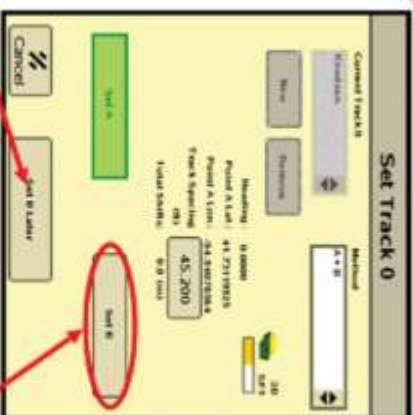

Step 2: Select "New" and input a name for your line.

***Note:** Be sure the correct Method is selected.

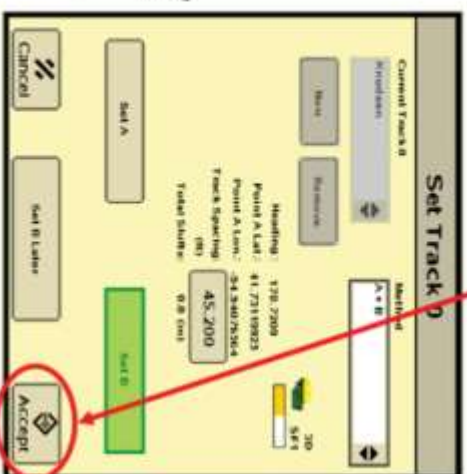

Step 3: Position Machine in starting point, and press "Set A"

***Note:** If you choose the "Set B Later Tab" you will be taken back to the home screen with the option to "Set B" there.

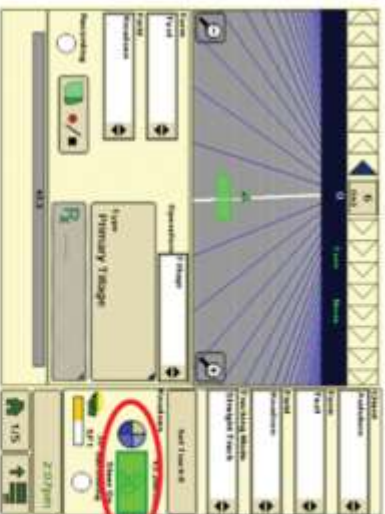

Step 4: After driving at least 30ft, select "Set B"

Step 5: After pressing the "Set B" Tab, the Accept button will become active. Press this tab to complete the line.

Step 7: Press the Resume button in the respective machine you are operating. The Pie should turn to a green "A" when AutoTrac is Active.

Step 6: Press the "Steer Off" button to turn the Steering On. Once you have done this, there should be 3 pieces of the pie.
