

Transferring Data from the Display (GS3 2630) “Exporting Data”

1. Press the box next to the “Export Profile Name.”

2. Press “New” to create a new name for the file to be exported. If you have created a profile name already, you may use that profile, but keep in mind any data in that file will be overwritten by the new file information.

3. Use the keypad to enter your desired profile name. It is recommended to use your operation, farm, or last name and the date. This will help manage the different export files that are on the storage device.

Press “Accept.”

4. Once you have chosen or created a profile name, press “Begin Transfer.”

Wait for the transfer to complete to remove your USB device.
